

Dr. V's 630's Science Weekly Summary
Week of January 22nd 2018

Monday Jan 22nd: Student continued to participate in the PowerPoint presentation on Weather:Water cycle. The student learned about the "Thermohaline Circulation" also known as (aka) the Global Conveyor Belt that moves water, nutrients and heat from the equator regions to the northern regions.

Tuesday Jan 23rd: Students continued to take notes on the role of the oceans and we talked about the **Thermohaline (heat and salt) circulation** as well as the high specific heat of water. Examples were given as to why this was so important for our oceans and our planet.

Wednesday Jan 24th: Students completed the drawing of the water cycle as we continued with our presentation. Terms were defined and examples given for a variety of water cycle vocabulary words.

Thursday Jan 25th:

Friday Jan 26th:
