

Dr. V's 630's Science Weekly Summary
Week of June 11th 2018

Monday June 18th: Students were graded for the thoroughness of their study guide. Students that had completed a thorough study guide were asked to share with a group of their peers that did not do as thorough a job. As a group recipient students were asked to check the donor study guide to see if it was missing information then add it to their copy and inform the donor. All students should have a thorough and detailed study guide. For homework all students were asked to review the study guides and pass along any additional missing information to their peers. Part II, students reviewed the comments I had made to their 3 questions. Students were asked to fix any issues with their questions in class or ASAP thereafter.

Tuesday June 19th: Students worked on their reviewing their study guides - I suggested that they make a copy and slowly delete information they are confident they already know. The goal will be to have a blank study guide and reduce the amount they need to review. Students were also encouraged to review their classes questions and report any incorrect answers to the creator and me. Many students have been collecting questions from the other classes to review more of what will be on the test. If you have friends in other classes, make use of these connections.

Wednesday June 20th: Human Body Systems Unit Test.

Thursday June 21st:

Friday June 22nd: Field Trip to Lake Pearl
