

Dr. V's 630's Science Weekly Summary  
Week of June 4th 2018

**Monday June 4th:** Students completed their notes on the cardiovascular system after we reviewed the path that blood takes through the heart, the special names for the 4 blood vessels that enter and leave the heart as well as the important properties of capillaries. Students were reminded that capillaries are present in both the pulmonary circuit as well as the systemic circuit. Students learned about atherosclerosis as well as hypertension and how these related to various heart issues. I reminded students that reviewing their quizlet terms was not optional.

**Tuesday June 5th:** Students measured their plants and entered their qualitative and quantitative data into their personal Google Sheet. When they were done they entered the length data into the shared Google Sheet. We then reviewed the Respiratory System packet from last week. Students were given a completion grade for their packets before we reviewed them.

**Wednesday June 6th:** Students that had more than one plant growing in their pots chose the healthiest plant to keep, the others were culled. Students that have not yet added fertilizer to their pots added one pellet and covered it with soil. Students then completed a blank template of the respiratory system and the cardiovascular system using what they have learned and if needed their quizlet. We then played a few minutes of Quizlet Live to review the terms in the student's quizlet in preparation for Friday's quiz.

**Thursday June 7th:** Student received a packet on the Nervous system. It introduces several key terms and students were asked to read the packet first, then color in the images and highlight the important text (look for bold words, definitions, answer to questions). Students were reminded that this was NOT homework. They should prepare for these quiz tomorrow and if they did not finish yesterday's homework this should be done tonight.

**Friday June 8th:** Vocabulary quiz on the Cardiovascular and Respiratory systems. Students that complete their quiz should continue working on their Nervous system packet. All images must be colored for Monday.
