

Dr. V's 630's Science Weekly Summary
Week of March 19th 2018

Monday Mar 19th: Students were reminded that they have the project rubric and that today would be their last class period to complete their project. The project is not due until Wednesday but they need to find time to work outside of class on their projects. I shared with all classes that the full version of Thinglink is available if they use the link in the class comments of the GC assignment along with the join code.

Tuesday Mar 20th: Students were given one extra day to work on their projects. The due date was extended to the end of the day on Wednesday to allow students to all export their projects and attach them to their GC assignments for me to evaluate.

Wednesday Mar 21st: Students were walked through the process of saving their projects. Explain everything and iMovie were both instructed to export these and attach them to GC along with their Google slides. Each group was asked to have the same person that owns the Google Slides in the partnership, to turn in the project they completed if it was more than the slides. We then introduced the digital textbook and any student that did not have their student # was given it and we tried logging into the digital textbook site.

Thursday Mar 22nd: Students were asked to show that they could log into the digital textbook. We then worked on an assignment from the textbook in GC. Students also made the foldable to help them remember the 4 different types of macromolecules.

Friday Mar 23rd:
